DECODEX

CASE-BASED HACKATHON · OFFICIAL RULEBOOK

```
professor@suiit:~$ cat mission.txt
No problem statement will be handed to you.
It is hidden inside a repository. Find it. Choose it. Build it.
Then defend it in front of the judges.
professor@suiit:~$ █
```

DATE 06 OCT 2026	START 8:45 AM	ENDS 5:00 PM
TEAM SIZE MAX 4	TRACKS SW / HW	PRIZE POOL ₹15,000

// 01 THE MISSION

DecodeX is not a conventional hackathon. Teams receive no predefined problem statements — instead, each team gets a **GitHub case repository** and must investigate it to uncover the hidden problem statements, select one, and build a working solution before evaluation.

You are judged on more than code: problem discovery, analytical thinking, decision-making, feasibility, pitching, and how well you defend your solution under questioning.

// 02 WHERE THE PROBLEMS HIDE

decodex-case/

```
├─ src/           # code
├─ docs/          # documentation
├─ data/          # datasets
├─ issues         # open threads
├─ branches       # parallel stories
└─ commit history # the trail
```

Clues may sit anywhere: files, code, documentation, commit history, issues, branches or data. The exact structure is **not disclosed in advance**.

The goal: identify a meaningful problem from incomplete or indirect information — fast.

// 03 OPERATION TIMELINE

[08:45]	SYSTEM	Check-in & opening address
[09:00]	BRIEFING	Case investigation & problem discovery begins
[10:30]	DEADLINE	Problem statement submission — submission speed counts
[10:30]	BUILD	Hackathon Phase I — design, develop, implement
[13:00]	PAUSE	Lunch break
[14:00]	BUILD	Hackathon Phase II — test, refine, prepare pitch
[15:00]	TASK	Evaluation — pitch, live demo, judge interaction
[17:00]	FINAL	Hackathon ends · final evaluation & closure

// 04 CASE FILE ACCESS

SOFTWARE TRACK

- > Repository handed to registered teams **on the spot**, at the start
- > Decode it, list the problem statements you discover
- > Select **ONE** and submit it by **10:30 AM**

HARDWARE TRACK

- > Repository shared **one day before** the hackathon
- > You may investigate early — but submit only within the discovery window on the day
- > Build your solution around the **ONE** problem you submit

// 05 RULES OF THE OPERATION

- > Max **4 members** per team
- > Compete only in the track you registered for
- > Only your submitted problem statement may be the basis of your final solution
- > Your prototype must be functional enough to demo
- > Public libraries, frameworks, APIs, datasets & tools are allowed unless restricted
- > Disclose any external service, API, model or dataset that materially contributes
- > No copying another team's solution, implementation or presentation
- > Plagiarism, impersonation or interference with other teams may lead to **disqualification**
- > Be ready to explain your architecture, data flow & technical decisions
- > Organizers' decisions on rules & eligibility are final

// 06 HOW YOU WILL BE JUDGED

Workingness / Implementation		30%
Problem Statement Decoding Efficiency		20%
Feasibility		20%
Pitching		15%
Question & Answer		15%

Decoding efficiency rewards how quickly and accurately you find a relevant problem. Workingness covers functionality, completeness, demo quality and technical execution. Feasibility looks at practicality, scalability and real-world potential.

// 07 THE VAULT

₹5,000

2ND PRIZE

₹7,000

1ST PRIZE

₹3,000

3RD PRIZE

Total prize pool • ₹15,000

// 08 REGISTRATION

- > Register through the official DecodeX registration process and pick your track: Software or Hardware
- > Registration details must be accurate and complete; only registered & verified teams can compete
- > Changes to team composition after registration need organizer approval

// 09 PRE-MISSION CHECKLIST

- | | |
|---|--|
| ✓ Report to the venue early & complete check-in | ✓ Bring your own laptops & dev equipment |
| ✓ Chargers, adapters & cables | ✓ Hardware teams: boards, sensors & components |
| ✓ Keep regular backups of your work | ✓ Follow venue rules & respect everyone |
| ✓ Internet use for research & dev is permitted | ✓ Report repo or process issues immediately |

!! **DISCLAIMER** Case repositories may contain fictional organizations, systems, datasets or incidents. Never use case material to access, attack or interfere with any real-world system — any activity outside the authorized scope may lead to disqualification. You are responsible for your own code, hardware, accounts and credentials.
